## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-3, 7-10 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Brunolli (US 6,731,135).
- 3. With respect to claim 1, figure 3 of Brunolli discloses a current driver circuit for driving a pair of transmission lines by allowing a current to flow in a terminal resistor (RD21, RD22) connected between the pair of transmission lines, the current driver circuit comprising:

a current driver having a current source transistor (QB) connected to a power source potential level, the current driver being coupled to the pair of transmission lines; and

a current compensation circuit (306, 304, 310) for compensation of an output current from the current driver in response to a common mode potential of the pair of transmission lines, the current compensation circuit being coupled to an output side of the current source transistor.

4. With respect to claim 2, figure 3 of Brunolli discloses the current compensation circuit initiates the compensation of the output current when a difference between the power source potential level connected to the current source transistor and the common mode potential becomes smaller than a specified value.

Application/Control Number: 10/701,500 Page 3

Art Unit: 2819

5. With respect to claim 3, figure 3 of Brunolli teaches the current compensation circuit increases the output current by a reduction in the output current when the current source transistor enters a non-saturated region.

- 6. With respect to claim 7, figure 3 of Brunolli discloses a switch (301).
- 7. With respect to claim 8, figure 3 of Brunolli teaches a current driver circuit for driving a pair of transmission lines by allowing a current to flow in a terminal resistor (RD21, RD22) connected between the pair of transmission lines, the current driver circuit comprising:

a current driver having a plurality of switch circuits (Q1-Q4) for controlling a current flowing in the pair of transmission lines; and

a current compensation circuit (301, 304, 306) for controlling stepwise respective operations of the plurality of switch circuits in response to a variation in a common mode potential of the pair of transmission lines.

- 8. With respect to claims 9 and 10, figure 3 of Brunolli teaches the current compensation circuit operates stepwise the plurality of switch circuits as a difference between a power source potential level and the common mode potential is reduced.
- 9. With respect to claim 13, figure 3 of Brunolli teaches the switch elements composing the plurality of switch circuits is composed of a miniaturized MOS transistor (Q1-Q4).

## Allowable Subject Matter

- 10. Claims 4-6, 11 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 11. The following is an examiner's statement of reasons for allowance:

With respect to claim 4, the prior art does not teach the compensation circuit having a miller transistor.

With respect to claim 11, the prior art does not teach a resistor connected in series between a switch element.

With respect to claim 12, the prior art does not teach a resistor connected to a gate of a MOS transistor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Don P. Le whose telephone number is 571-272-1806. The examiner can normally be reached on 7AM - 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael J. Tokar can be reached on 571-272-1812. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
